MARKET VIEW: As gasoline production gradually came back online following Hurricane Harvey, U.S. gas retail prices decreased and, according to the U.S. Energy Information Administration (EIA), are expected to further fall through the end of 2017. In power trends, coal and electricity prices continue to increase. In 2017, the price of coal has averaged \$2.14/MMBtu, a 1.4% increase from the average 2016 price. Average residential electricity prices are expected to increase by 3.3%. Solar growth has been led by falling prices, which have dropped 19% over the past 12 months. In both energy and power sectors, M&A increased from Q2 2017 to Q3 2017. Private placements in the energy sector remained steady, and doubled in the power sector.
